in your clinic.

TECNO-GAZ  
INTEGRATED PROJECT

# A WORLD BUILT AROUND YOU.

We offer a *complete Tecno-Gaz clinic.*

Tecno-Gaz offers a wide a range of solutions to handle, manage and expand the operations of your practice. Our solutions not only provide the single product, but also a range of services, skills and expertise.

# 360

# THE NEW MULTISTERIL FAST

Multisteril Fast,  
disinfection in only **25'**

- + Exactly the time required to order and wrap your instrument sets
- + The presence of the assistant is only required for wrapping.
- + Multisteril Fast, totally automatic and autonomous, will carry out all the pre-disinfection phases by itself.
- + Ask your dealer for a presentation, thus saving precious time for your patients.

**Faster** ✓  
**Safer** ✓  
**Cleaner** ✓

use parameters

# KYRI

The Kyri project can be configured according to a purely surgical logic, which can then be developed in a multifunctional surgery, with the addition of the water unit and the cart with instruments.

## KYRI

Kyri is the only surgical chair designed and built according to the rules of dental ergonomics. The chair movements are controlled by four motors, thus allowing the chair to be moved into any position, facilitating the operator's work and increasing the patient's comfort. The chair can be equipped with a satellite arm for cannula suction and side rails on which it is possible to put any accessory: armrests, infusion supports, supports for housing arms, etc..

### 3-axis orbital headrest

70% of implants involving molars and premolars require lateral surgery. This headrest ensures better posture and less muscular pressure for the patient, thereby facilitating such surgery.

3D LOCK  
SYSTEM

### Infinite number of positions based on 5 axes

Kyri assists you in any position. Thanks to its 5-axis movement, it can assume any position required to ensure its conventional operation, as well as unusual or unexpected positions.

Dental

### Anti-shock and emergency positions

Orthopaedic or semi-seated position

Trendelenburg

Fowler

### Surgical Table

Variable height

Multi-purpose  
Surgical Clinic

Surgical Clinic

# A modularity that allows you to expand your surgery according to your requirements.

## + Ergoseat

The device is designed to guarantee correct posture, thanks to the inductive system with integrated motion between seat and back.

## + Smart Trolley

The first range of technical furniture, providing greater efficiency of your daily work. A real innovation and evolution in dental cabinets.

80+

More than  
80 possible  
configurations

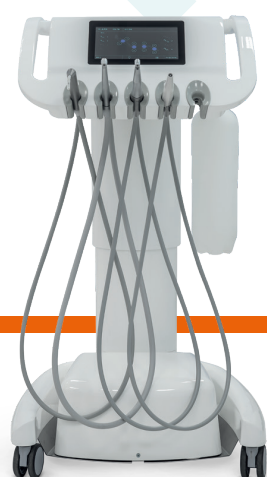

## + Orion 40Ds

Universal lamp, with field selection: 15 and 20 cm field width adjustable light intensity, intense spot light depth, double colour temperature, extreme manageability.

## + KYRI CART

Possibility of configuration and operational flexibility thanks to Kyri Cart. Five slots for instruments and total control of Kyri settings to store and recall your preferred positions.

## + Kyri Water Unit

The element that makes the surgery truly versatile, (from surgery to general dentistry). It can be placed under the worktops and equipped with suction cannulas.

## + Kyri Dss

New surgical aspirator: adjustable suction, control pedal, double basin and disposable bags with valves.

## + Kyri Bridge

The bridge table is a simple accessory positioned in the common ergonomic space between doctor and assistant. Its strategic position contributes to the quality of surgical treatment.

80 possible  
configurations

# SMART TROLLEY

Unlimited  
setups

Tecno-Gaz has developed the SMART TROLLEY concept, changing what seemed unchangeable. SMART TROLLEY is a real revolution, not only because it completely innovates a sector, but also changes the identity and role of a major component of the dental surgery. The 'FURNITURE' is no longer simply a an attractive element, but a component of organisation, order and efficiency - an asset in the daily work of the surgery.

**IT IS TIME  
TO MAKE  
YOUR CLINIC  
OPERATIONAL**

- ✓ **Created to make work easy and productive**
- ✓ **From the container to the operating device**
- ✓ **Suitable for all clinics: can be easily integrated and configured**

The first impressions and moments of any treatment are the most important factors for both patient and operator. This is when levels are set for tension and the relative quality of any following dental procedure. A clinically welcoming environment provides the patient with a positive impression and the dentist with excellent ergonomic operation.

## + SMART TROLLEY Intra Operator

Plan in case Surgery does not go as planned. You may need different implants size, additional instruments, anesthetics, ... Because of surgical time to respect, hygiene procedure, and patient management, it is not thinkable to leave the room to look for the missing components. Smart Trolley Intra Operator is the temporary stock you need, at immediate reach.

HQ guides with  
removable  
drawer

## + SMART TROLLEY Electromedical

Tilting  
surfaces

Dental staff use a large amount of electromedical instruments during dental procedures. The solution is the Electromedical Smart Trolley which, with its centralised power supply system, modularity, and the accommodation of bulky pedal commands, becomes an indispensable organisational and functional element.

## + SMART TROLLEY Postoperative

To save time and efficiently manage waste and contaminated material, we have developed the Postoperative Smart Trolley. Thanks to its built-in decontamination tank and recycling compartments, it is a hub for the collection and sorting of infected material.

Light intensity up to:  
**130,000 Lux**

Colour temperature:  
**4,500/5,000 K**

Illuminated field:  
**15 cm and 20 cm**

Special for dental use

## Why use a dental surgical light?

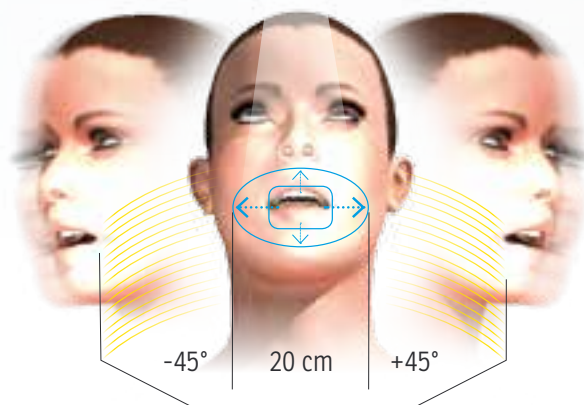

The lighting must provide precise transmission of visual information from the work area to the surgeon during the operation, but must also guarantee eye protection.

## Possible visual damage by traditional lighting

Light is essential for the eyesight, which must be taken care of from the beginning of your career, not when problems arise.

Invest in your main diagnostic tool:  
**your eyes.**

# PROTECT YOUR EYES

with a dental surgical light

## The unique lamp specifically designed for dentistry!

Orion 40 DS is a development of the famous Orion 40 dedicated to the clinical needs of the dentist. The first surgical light specifically developed for dental use thanks to photometric measurements calibrated according to the dentist's requirements: 80 cm focus, 15 cm illuminated field up to 130,000 lux and temperature of 4,500/5,000 k. ORION 40 DS is the first multifunctional light for dental practices, which, thanks to the unique E-Dentalight technology (joint function), switches to surgical light.

## E-Dentalight

This function enables the replacement of lighting generated by traditional lamps. This unique feature enables the activation of two modules and the adjustment of their intensity and colour temperature.

## Cold light

The increase of heat radiation on the surgical field is proportional to the quantity and power of the LEDs used. Thanks to the indirect light concept, Tecno-Gaz uses fewer LEDs.

## Parabolic indirect lighting

## Double illuminated range

The ranges of light intensity of the Orion 40DS Lamp change according to operator's requirements:

- E-Dental Light Function: 15 cm field with variable intensity from 20.000 to 55.000 lux for general dentistry treatments.
- ORION Light Function: 20 cm extended field with variable intensity from 40.000 to 130.000 lux for surgical treatments and implants placing.

# MasterFlux Plus

## New IntelliFlux delivery system

IntelliFlux is designed to solve all the problems caused by sedation mask circuits. IntelliFlux has a connection with backflow valve to prevent dispersion and increase and enhance the sedation process.

## Automatic flow control

The system has been designed to make flow administration quick and easy. Turning the O<sub>2</sub> knob, the flow required by the patient is set in litres per minute, depending on his/her respiratory volume. The special regulation knob enables the percentage of nitrous oxide delivery to be automatically adjusted from 0 to 70%.

The columns indicating the flows have been designed for fast and easy reading. The couplings have been fitted on the back of the flow control box and their attachments are physically different to safeguard against the risk of inverting the hoses for the two gases. Yet another precaution to guarantee safety in the use of the machine.

## Safety device

### Minimum oxygen concentration

A constant percentage of 30% oxygen safeguards against the risk of HYPOXIA and ANOXIA.

## O<sub>2</sub> Emergency

By pressing the O<sub>2</sub> device, thus cutting of the N<sub>2</sub>O flow, **100% oxygen is delivered both to the control balloon and to the patient being treated.**

## Anti-expired gases valve

A special valve prevents expired gases from being recycled in the circuit. Additionally, a special device enables the patient to breathe ambient air in the event of a gas failure.

## N<sub>2</sub>O cut-off

Cuts off the N<sub>2</sub>O flow when O<sub>2</sub> pressure is zero (no oxygen).

# THE NEW CIRCUIT

IntelliFlux supplies gas through two central tubes, which do not obstruct operations.

Rear elastic support to secure the mask to the patient's face.

## Ergonomics

- Perfectly suited for 4-hand usage.
- Circuits joint located above the patient's head avoiding impediments to the treatment.
- Can be moved in all positions.

## Fast and efficient sedation

- Perfectly sealing mask suitable for any face shapes and curves for a faster, more efficient sedation treatment.

## Pleasant treatment

- The patient is sedated, enjoying a peaceful experience, breathing through a mask that will leave no marks on his/her face.
- The frontal holder and the rubber elastic band ensure stability.

## No gas dispersion in dental clinic environment

Many particular specifications contribute to prevent dispersion such as:

- Backflow valve.
- Adaptable connector to dental suction unit.
- New easy-breathe membrane.
- Face-adaptive, single use silicone form.

## Advantages of the new mask and new circuits

Nose masks are no longer 100% silicone, but have a rigid transparent polysulfone centre shell, which enables visibility and prevents any torsion, thus guaranteeing a perfect fit. The adaptive cushioning and front forks enable perfect, stable positioning, thus preventing any gas dispersion or leakage. All parts of the nose mask are autoclavable and the centre connection contains the backflow valves.

# Services and Resources

A WIDE RANGE OF **EXCLUSIVE** SUPPORT SERVICES TO **IMPROVE YOUR WORK**

## Free Video Tutorials online

Tecno-Gaz has made 14 videos, describing the main advantages of the daily use of sedation. These are available on the TECNO-GAZ YouTube channel. Also on demand by writing to [marketing@tecnogaz.com](mailto:marketing@tecnogaz.com)

- Individualised dosage - Sedation level & incremental technique - Induction and recovery - Safety margins
- Metabolism - Side effects and contraindications - Analgesic potential - Psychically and physically disabled patients - Children - Machine safety - Treatment safety - Long, complex, traumatic treatments - Fear, phobia, anxiety

## Service Plus for Sedative Analgaesia

- 1 In the countries in which Master Flux is distributed, we can count on the collaboration on the part of universities and professionals, able to offer information and training on the use of our products, to implement the technique in daily application.
- 2 In Spain, the collaboration with UIC (Universidad Internacional de Catalunya) is very fruitful and, every year, this university proposes conscious sedation training courses.
- 3 The sedation system is an integrated part in the work of the university.
- 4 The professors of the medical faculty of the university collaborate actively with our company by holding conferences and presentations regarding conscious sedation: Manuel Ribera, Victor Gil, Inma Puga etc.

## Conferences

Every year, Tecno-Gaz organizes conferences about the advantages of the use of sedation in dentistry, in partnership with our distributors.

## Tutoring

Tecno-Gaz and its distributors operate on the territory with qualified representatives, who can provide continuous on-site training on conscious sedation and products. The distributors can also have equipment in their showroom, where they can show the whole TECNO-GAZ product line.

## Technical support

Tecno-Gaz has a wide network of dealers, who can provide on-site technical assistance.

## End-user training

To optimise the use of sedation equipment at a daily level, it is important for a user to express doubts and enquiries to an experienced professional. Through our distributors, we can organize specific courses for small groups of users in the presence of a university professor providing practical training.

## Bibliography

An extensive scientific bibliography confirms the safety of the technique in dentistry, and we can make all this bibliographical documentation available.

## University training

Through its distributors, Tecno-Gaz can offer university training and award an attendance certificate.

## Remote phone assistance

To optimise the use of sedation equipment at a daily level, it is important for a user to express doubts and enquiries to an experienced professional. It is possible to book a date and time for a 1 hour consultation about sedation and technique.

A **GREAT EXPERIENCE** BECOMES A **GREAT VALUE** FOR CUSTOMERS

The life-saving device  
**FIRST-AID**

IS IT AN **OBLIGATION** OR NOT?

# Defibrillator

THE UNIQUE DEFIBRILLATOR WITH **EXCLUSIVE FEATURES!**

Obligations are often seen as "constraints", discussed and interpreted according to one's own interests. But when we speak about life-saving products, we must focus on ethics and common sense, as opposed to the concept of obligation. It is clear that in all environments where surgical techniques are practised, as in the dental field, devices must be adaptable to intervene in case of critical involving the patient. Therefore, the pulse oximeter, oxygen and AED defibrillator, become instruments which must be present.

- 1 **Cover:** the cover is designed to protect the action icons, patient mode button and charge button.
- 2 **Status indicator:** the status indicator indicates the status of the unit, the temperature and the battery level.
- 3 **Paddle connector:** the paddle connector is used to connect the electrodes.
- 4 **Action Icons:** the LED indicator flashes red under the corresponding action icon.
- 5 **Patient mode switch:** once the user has identified the patient based on type, patient mode (either adult or pediatric) is selected using the mode switch.
- 6 **Charge button:** once preparation for the electric discharge is completed, the current discharge button will flash. Press the current discharge button to deliver the shock.
- 7 **Sliding button:** the sliding button opens the cover, to turn on push the sliding button to the right.
- 8 **SD card slot:** the SD card is required to save data and update AED firmware.
- 9 **Infrared communication port:** the infrared communication port is used to communicate with the PC.

**+ E Point**
